

Want to know how you stack up?

ACES Analytics™

- Understand how your quality control results compare to peers
- Leverage ARMCO experience across a broad range of customers
- Identify areas for improvement within your organization

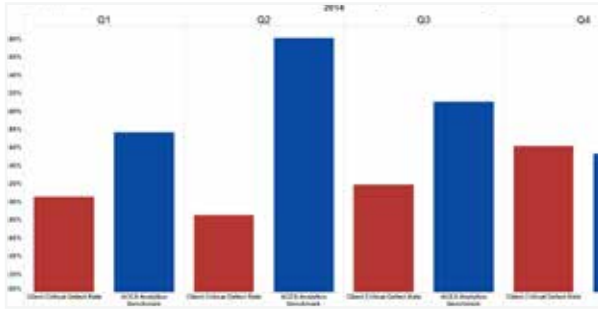

Stop guessing. No questioning if your quality is good enough. ARMCO has made it possible for mortgage quality control professionals to benchmark their loan quality results.

ACES Analytics, the first of its kind, leverages leading business analytics and dashboarding tools so you can compare your quality control results to industry peers. We at ARMCO realize that no two organizations perform QC exactly alike. Overall loan ratings and even ways of classifying exceptions (loan defects) vary from organization to organization. The only way to truly understand the quality of your loans is to benchmark against others, using results standardized and normalized via ARMCO's proprietary technology.

Business Analytics

Determine how your company performs compared to the industry standard. See how your imported QC data relates to industry-provided QC data. Compare your critical defects against the ACES Analytics Benchmark by quarter.

Heat Maps

See national, regional, state or even local hot spots and visually understand your quality control results. Heat maps can drill down to view critical and non-critical defects by city and trouble areas that need more attention.

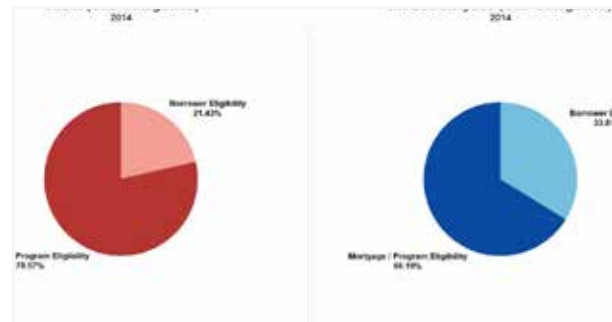

Audit and Exception Trends

View trends over time to see whether your results are moving in the same direction as those of the industry. Comparing your critical defect rate by FNMA Category against the ACES Analytics Benchmark allows you to quickly identify how your organization stacks up against the industry.

Industry Insight

Are you curious if you have more loan program eligibility issues than borrower eligibility issues and how your results compare against your peers? ACES Analytics gives you this insight.
